

# Integration Guide: Machine Tending with UR

This document provides an overview of the integration and setup for a machine tending robot cell that uses a Universal Robots cobot. Upon completing the mechanical assembly of your machine tending robot cell, plan between 4-8 hours for the electrical and software configuration prior to production start.

Note that all components that surround the cobot are available on the Vention platform and are delivered as a kit.

Below is a list of topics covered in the integration guide.

## Table of Contents

Item	Page
General overview	1
Mechanical installation	2
Wiring	3
End-of-arm tool	5
Configuration	7
Safety setup	10
Verification	11
Calibration & initial programming	15
Additional information	20
Appendix A - Vertical range extender	22
